PROFESSIONAL SUMMARY

Performance-driven SOC Analyst 1 with 3 years of experience at Bell Canada specializing in designing and maintaining CI/CD pipelines, cloud infrastructure, and containerized environments. Proven track record in automating deployment workflows provisioning scalable infrastructure via Terraform, and managing AWS services including EC2, S3, and Lambda. ensuring security compliance through IAM hardening and vulnerability assessments

TECHNICAL SKILLS

CI/CD & Automation	GitLab CI/CD
Cloud Infrastructure	AWS (EC2, S3, Lambda, IAM, VPC, CloudWatch, EMR)
IaC & Config Mgmt	Terraform (HashiCorp Associate Certified)
Containers & Orchestration	Kubernetes awareness
Monitoring & Observability	Prometheus, Alertmanager, Grafana, AWS CloudWatch
Security & Compliance	IAM hardening, Security Groups, NACLs, least-privilege access, Vulnerability Assessment
Version Control	GitLab

WORK EXPERIENCE

SOC Analyst I | Bell Canada

2023 – Present | Toronto, ON

- Collaborated with development, operations, and security cross-functional teams to understand infrastructure requirements — designing and implementing AWS cloud solutions (EC2, S3, VPC, Lambda, IAM, CloudWatch, EMR) using Terraform and CloudFormation to meet business and compliance needs.
- Designed, implemented, and maintained GitLab CI/CD pipelines for automated build, test, and deployment of ML workloads — streamlining software delivery and deployment automation across dev, staging, and production environments.
- Provisioned and managed AWS infrastructure across 20-30 workloads including EC2 instances, S3 buckets, EMR clusters, Lambda functions and VPC configurations using terraform modules to ensure consistent, repeatable environments across dev, staging and production.
- Monitored system performance using AWS CloudWatch, Prometheus, and Grafana — set up threshold-based alarms for EC2, S3, and EMR cluster workloads, proactively identifying anomalies and implementing optimisations to maintain high availability, reliability, and scalability.
- Collaborated with security teams to implement and enforce cloud security best practices — including IAM role permissions, security groups, NACLs, and least-privilege access controls across 4–6 AWS accounts in a compliance-driven regulated environment.
- Identified and resolved 5–10 infrastructure configuration drifts by reconciling manual AWS changes with Terraform-managed state — documenting root cause analysis (RCA), corrective actions, and drift-prevention controls to maintain system integrity.

KEY PROJECTS

CI/CD Pipeline Implementation — GitLab Automation for ML Workloads

- Designed and maintained GitLab CI/CD pipelines for automated build, test, and deployment workflows — enabling faster, reliable software delivery across multiple environments in a regulated enterprise.
- Extended pipelines to support artifact deployment to Amazon S3 and JFrog Artifactory; integrated SAST and Xray scanning to enforce security and compliance at the pipeline level.

OCP Observability Stack — Prometheus + Alertmanager + Kubernetes (Docker)

- Deployed and managed Docker-containerised workloads on OpenShift Container Platform (Kubernetes) — integrating Prometheus for cluster-wide metric collection and Alertmanager for centralised alert routing.
- Authored custom alerting rules to monitor pod status and trigger incident response workflows; documented all observability configurations and alert runbooks for team knowledge sharing.

AWS CloudWatch Monitoring & System Performance Optimisation

- Configured CloudWatch threshold alarms for EC2, S3, and EMR — proactively tracking system health, identifying performance bottlenecks, and implementing optimisations to improve availability and reliability.
- Tuned alarm thresholds to reduce false positives; performed RCA for recurring alerts and documented preventive controls and resolution procedures.

AWS IAM Governance & Security Compliance

- Worked with security teams to administer VPC configurations, subnets, security groups, NACLs, and IAM roles across 4–6 AWS accounts — enforcing least-privilege access and cloud security best practices.
- Resolved security findings and tightened IAM policies; documented all access control configurations and compliance procedures to support regular audits and team knowledge sharing.

CERTIFICATIONS

AWS Certified Cloud Practitioner (CLF-02)	Amazon Web Services	<i>Exp. Dec 2028</i>
HashiCorp Terraform Associate (003)	HashiCorp	<i>Exp. Jun 2027</i>

EDUCATION

Ontario College Graduate Certificate in Cybersecurity	2021 – 2023
Loyalist College, North York, ON	2017 – 2020
B.Tech in Electronics & Telecommunications Engineering	
KJ Somaiya College of Engineering, Mumbai
